PROFESSIONAL SUMMARY

Motivated Computer Science and Business Systems undergraduate with strong core programming foundations in C, C++, Java, and Python. Proficient in Data Structures and Algorithms (DSA), problem solving, and building responsive software applications using React.js, JavaScript, and Git. Passionate about software engineering fundamentals, algorithmic complexity, and scalable logic. Seeking a Software Development Engineer (SDE) Internship to contribute to impactful software solutions.

TECHNICAL SKILLS

Programming Languages:	Java, Python, C, C++, JavaScript (ES6+)
Core Concepts & DSA:	Data Structures & Algorithms (DSA), Problem Solving, Component-Based Development
Web Technologies:	React.js, HTML5, CSS3, Responsive Web Design
Tools & Platforms:	Git, GitHub, Visual Studio Code, Local Storage

EDUCATION

Rajalakshmi Institute of Technology — <i>Chennai, Tamil Nadu</i>	2025 – 2029 (Expected)
<i>Bachelor of Technology (B.Tech) in Computer Science and Business Systems (CSBS)</i>	
• Cumulative Grade Point Average (CGPA): 8.29 / 10.00	

PROJECTS

Google Form UI Clone / <i>React.js, JavaScript, HTML5, CSS3, Git</i>	GitHub Repository
• Engineered a fully responsive event registration software interface modeled after Google Forms using React.js.	
• Applied component-based development principles with highly reusable form elements to minimize visual redundancy.	
• Optimized layout transitions and cross-device scaling using modern CSS3 and responsive web design techniques.	
React To-Do List Application / <i>React.js, JavaScript, Local Storage, HTML5, CSS3</i>	GitHub Repository
• Developed a task management application leveraging React Hooks (useState, useEffect) for seamless state management.	
• Integrated browser local storage API to ensure client-side data persistence across user sessions.	
• Implemented dynamic task state updates and data rendering logic to ensure efficient UI state synchronization.	
Custom Password Generator / <i>React.js, JavaScript, HTML5, CSS3</i>	GitHub Repository
• Created a modular React.js application generating secure passwords based on real-time length constraints and character filters.	
• Designed functional string algorithmic logic and dynamic state management to process custom user selection parameters.	
• Integrated smooth browser API text copying functionality to enhance application usability and convenience.	
Messenger Frontend UI / <i>JavaScript, HTML5, CSS3, Responsive Design</i>	GitHub Repository
• Designed and implemented a modular chat application interface utilizing standard HTML5, CSS3, and JavaScript.	
• Ensured fluid layout transitions, strict responsive scaling, and an intuitive component structure across modern browsers.	

CERTIFICATIONS

- **NPTEL Certificate:** The Joy of Computing Using Python (Score: 69%)
- **Core Programming Certificates:** C, C++, Java, and Python Programming Foundations
- **Professional Path:** Python Full Stack Development (Currently Pursuing)

ACHIEVEMENTS & ACTIVITIES

- **Second Prize:** Awarded for innovative presentation and prototype implementation in a college-level Hackathon.
- **Hackathon Participant:** Successfully collaborated on software prototypes in 3 distinct competitive Hackathons.
